

# RISHON GHOSH

(236) 509-8685 | rga98@sfu.ca | Surrey, BC | <https://github.com/rishon-g>

## SKILLS

---

### Programming Languages

Python, Java, C, SQL, JavaScript, HTML/CSS

### Frameworks & Tools

Flask, VS Code, libGDX, Git, Maven, JUnit, JaCoCo

### Business Skills

Financial Accounting, Excel, PowerPoint, Leadership, Sprint Planning & Execution

## EDUCATION

---

### Simon Fraser University

*Bachelor of Science, Computer Science (In Progress of Joint Major with Business)*

Expected 2028 December | Burnaby, BC

- CGPA: 3.9/4.33
- Relevant Coursework: Algorithms & Data Structures (A), Introduction to Software Engineering (A), Business Technology Management (A-)
- Awards: Dean's Honour Roll, President's Honour Roll, SFU Undergraduate Open Scholarship

### Harvard CS50 Certificate

2025 May – 2025 August

## PROJECTS

---

### Tindog

2025 September

*Fallhacks Hackathon | Python, Flask, SQLite, Javascript, HTML/CSS*

- Collaborated with a 3-person team during a 12-hour hackathon to engineer a full-stack web app that allows users to create dog profiles and "swipe" to find mutual matches based on shared musical interests.
- Ensured application security by implementing password hashing and secure file-upload validation for user-generated content.
- Optimized data retrieval by writing complex SQL queries to track matches, reducing backend processing time.

### Graphite Gambit

2026 January – 2026 April

*CMPT 276, SFU | Java, Maven, JaCoCo, Junit, libGDX*

- Directed a team in the development of a 2D top-down game using Java and the libGDX framework, taking the initiative to establish structured agile weekly sprints and centralized merge-conflict resolution protocols
- Developed a robust map-loading system and collision engine, utilizing mathematical proofs in testing to ensure entity movement and bounds operated safely.
- Architected a comprehensive automated testing suite using JUnit and Mockito, achieving 71% branch coverage across core game packages.

### Rubik's Cube Solver

2025 October – 2025 December

*CMPT 225, SFU | Java*

- Developed a high-performance Rubik's Cube solver in Java using an Iterative Deepening A\* (IDA\*) search algorithm to find optimal solutions within a 10-second limit
- Engineered memory-efficient Pattern Databases using combinatorial indexing and factorial mapping, reducing a 43-quintillion state space into a ~2MB footprint for O(1) heuristic lookups.

## WORK EXPERIENCE

---

### McDonald's

2023 August – Present | New Westminster, BC

*Crew Member | 2x Employee of the Month*

- Collaborated with a team of 10+ to maintain high service standards during peak hours, consistently achieving target order-fulfillment times
- Resolved high-pressure customer service challenges and technical equipment malfunctions through quick critical thinking and effective communication
- Mastered proprietary POS software to process 200+ transactions daily with a 99% accuracy rate in cash handling and data entry
